

A GUIDE FROM AGENTIFY

Your Personal AI Agent, Explained.

A practical guide to your personal AI agent — what it actually is, a few of the endless ways it can help across your life and work, and how to start using it in the next five minutes.

agentify.live

Free 7-day trial · No credit card required

What Agentify actually is

Not a chatbot. An employee.

You've probably already got a general-purpose AI chatbot on your phone. It's useful — you open the app, type something, get an answer, close the app. The next time you open it, it doesn't remember what you told it last week. It can't call a business for you. It can't text you tomorrow morning with a reminder you didn't set. It waits for you to write the perfect prompt, and then it hands you words back.

Agentify is a different category of thing entirely. It's a personal agent — reachable at a dedicated phone number and email address that belongs only to you — that remembers who you are without being asked to, and that actually does the task instead of describing how you might do it yourself. You don't open an app. You just text it, the way you'd text a person.

The three differences that actually matter

A GENERIC CHATBOT

- × Starts from zero every conversation
- × Lives behind an app you have to open
- × Answers questions in words
- × Waits for a well-written prompt
- × One box, no separation between life and work

YOUR AGENTIFY AGENT

- ✓ Remembers you across weeks and months
- ✓ Lives at a phone number and email you already use
- ✓ Executes the actual task — drafts, tracks, books, reminds
- ✓ Works from a half-sentence, a typo, a ramble
- ✓ Separate agents for separate parts of your life if you want them

It remembers you

Your agent keeps track of what it learns about you across conversations — your name, your schedule, your preferences, the stuff you're actively working on. Mention once that you're training for a half marathon or that you hate morning meetings, and it factors that in later without being asked. It gets noticeably more useful the longer you actually use it.

what should i make for dinner tonight

You said last week you're trying to eat less takeout and you had good luck with that sheet pan chicken. Want a variation on that, or something totally different? I can keep it under 30 minutes since it's a Tuesday.

It does the thing, not just describes the thing

Ask a generic chatbot to help with your landlord and it'll give you tips on writing emails. Ask your Agentify agent, and it writes the actual email — ready to send, in your voice, tuned to the exact tone you want.

i need to email my landlord about the broken heater but i don't want to sound rude. can you write it

Here's a draft: Hi Marcus, the heater in my unit stopped working on Tuesday and it's getting pretty cold. Could you send someone out this week? Happy to be home whenever works. Want me to make it firmer or is that about right?

What's actually happening behind the text thread

You don't need to understand any of this to use your agent — but it helps to know it's not magic. When you text it, a language model reads your message alongside everything it already knows about you (your stored preferences, recent conversation history, and whatever it needs to pull from a connected tool — your calendar, your inbox, a live web search). It decides what the actual task is, uses the tools it needs to do that task for real, and then replies in plain language. The "thinking" and the "doing" happen in the same step — there's no separate app to switch to, because the agent already has the access it needs.

That's also why it can do things a chatbot can't: a chatbot only has the words you typed to work with. Your agent can actually go check — look at today's date, look at your real calendar, search the live web for a current price — instead of guessing from something it read once during training. When it doesn't have access to something or genuinely doesn't know, it says so, rather than inventing a confident-sounding answer.

You set the boundaries, always

Every agent ships with sane defaults, and every default is yours to change. Low-stakes, reversible things — setting a reminder, drafting a message, looking something up — happen immediately. Anything that leaves your control — sending an email as you, making a purchase, posting something publicly — waits for your explicit yes by default, until you decide to hand over more autonomy for a specific type of task. You can tighten or loosen that line for any category, at any time, with a single message.

you can just send my calendar invites without asking me first from now on, but always check before you spend anything

Got it — calendar invites go out automatically from now on, and I'll always confirm with you before any purchase, no matter how small. Want the same auto-send rule for reminders and follow-up texts, or just calendar?

That's the whole shift. One agent, built around you, that spans as many parts of your life and work as you need it to — a handful of examples are covered in the next chapter — and gets sharper every single time you use it.

One agent. Endless uses.

This isn't 12 fixed modes to pick from — it's one general-purpose agent that can take on whatever you throw at it. Below are a few of the most common examples, with the exact kind of messages people send it every day. If your task isn't listed here, ask anyway — chances are it can help.

1 Personal Assistant

Your everyday second brain — calendar, reminders, daily briefings, and drafting the emails you keep putting off.

Text it: "Remind me to call the dentist tomorrow at 10am."

Text it: "Give me a rundown of my day every morning at 7am."

Text it: "Draft a reply to this email — I want to say yes but push the date back a week."

Text it: "Check in with me Friday and ask if I actually called the dentist."

2 Shopping Agent

Tracks prices, watches your wishlist, and keeps recurring orders from slipping through the cracks.

Text it: "Watch this product and tell me when it drops below \$80."

Text it: "Reorder dog food every 6 weeks from Amazon — same brand as last time."

Text it: "Find me the best deal on a queen mattress right now."

Text it: "Track the return window on this jacket and remind me 3 days before it closes."

3 Finance Agent

Keeps an eye on your money — budgets, bills, spending alerts, and the investments you said you'd check on more often.

Text it: "Tell me if I spend more than \$400 on eating out this month."

Text it: "Remind me 3 days before my credit card payment is due."

Text it: "What's my rent-to-income ratio been the last 3 months?"

Text it: "Find every subscription I'm paying for and tell me which ones I haven't used in 60 days."

4 Health Coach

Workout plans, nutrition logs, sleep tracking, supplement reminders — keeps your protocol on track without a separate app.

Text it: "Log this — 3 miles, 28 minutes, felt good."

Text it: "Remind me to take my vitamin D every morning at 8am."

Text it: "Build me a 4-day strength split for someone who can only do 45 minutes."

Text it: "I've been sleeping like garbage this week — what patterns do you see and what should I try?"

5 Business Agent

A separate agent for work — leads, follow-ups, client comms, project status — so work and life don't bleed together.

Text it: "Follow up with the client I quoted last Tuesday if I haven't heard back by Friday."

Text it: "Give me a status update on all my open projects."

Text it: "Draft a proposal for a 3-month retainer based on my last one."

Text it: "Which invoices are overdue right now, and draft a friendly nudge for each?"

6 Home Agent

Maintenance schedules, vendor contacts, service reminders, and the family calendar — runs your household like clockwork.

Text it: "Remind me to change the HVAC filter every 3 months."

Text it: "Find me a plumber near me who does emergency calls on weekends."

Text it: "Track the warranty on our new water heater and remind me before it expires."

Text it: "Keep track of every quote we get for the kitchen remodel and flag which contractor is cheapest."

7 Travel Agent

Flight and hotel research, itinerary planning, price watches, and rebooking when plans change — it plans the trip so you can just show up.

Text it: "Find me flights to Denver the weekend of the 14th, under \$350."

Text it: "Watch this flight and tell me if the price drops before I book."

Text it: "Build me a loose 3-day itinerary for Lisbon, mostly food and walking."

Text it: "Make me a packing list for a 5-day cold-weather trip with just a carry-on."

8 Research Agent

Deep dives on any topic, competitor scans, and source-checked summaries — ask a hard question and get a real answer, not a guess.

Text it: "What are the pros and cons of a heat pump vs a gas furnace for a house in a cold climate?"

Text it: "Pull together what my top 3 competitors are charging right now."

Text it: "Summarize this 40-page report into the 5 things I actually need to know."

Text it: "Is this claim I saw online actually true? Here's the article."

9 Content & Social Agent

Drafts posts, captions, and replies in your voice, and keeps a content calendar so you're never scrambling for what to post.

Text it: "Turn this into 3 short LinkedIn posts in my usual voice."

Text it: "What should I post this week based on what's worked before?"

Text it: "Draft a reply to this comment — keep it friendly but firm."

Text it: "Which of my last 10 posts actually performed best, and why?"

10 Learning & Tutor Agent

Explains what you're studying, quizzes you, and tracks your progress over time — patient enough to explain it as many times as you need.

Text it: "Explain compound interest like I'm learning it for the first time."

Text it: "Quiz me on Spanish verb conjugations for 10 minutes."

Text it: "I got this practice problem wrong — walk me through where I went off."

Text it: "I have a certification exam in 6 weeks — build me a study schedule that fits around my job."

11 Event Planning Agent

Guest lists, vendor coordination, RSVP tracking, and day-of timelines — it runs the logistics so you can actually enjoy the event.

Text it: "Track RSVPs for the birthday party and remind stragglers 3 days before."

Text it: "Find 3 caterers near me that can do 40 people on a Saturday in June."

Text it: "Build me a day-of timeline for the wedding, starting from 9am hair and makeup."

Text it: "Keep a running tally of what we've spent on the wedding so far against the \$15k budget."

12 Real Estate Agent

Listing alerts, comps, mortgage math, and scheduling showings — whether you're buying, selling, or investing, it tracks the market for you.

Text it: "Alert me when a 3-bed under \$450k lists in this zip code."

Text it: "What have comparable homes on my street sold for in the last 6 months?"

Text it: "Schedule a showing for Saturday afternoon and text me the confirmation."

Text it: "If I put 15% down on a \$480k house at today's rate, what's my monthly payment look like?"

13 Family & Household Coordination

One agent that keeps everyone's schedules, chores, and shared logistics straight — so nothing falls through the cracks between family members.

Text it: "Keep the kids' after-school schedules straight and warn me the night before if two activities overlap."

Text it: "Add 'take out trash' and 'unload dishwasher' to the shared chore list and remind whoever's turn it is."

Text it: "Merge my grocery list with what my partner texted their agent — send me the combined version."

14 Multi-Agent & Team Ops

For anyone running more than one agent — a personal one plus a business one, or a small team each with their own — coordinating on a shared goal without losing context.

Text it: "Tell my business agent to send the invoice reminders it queued up, then let me know once it's done."

Text it: "Everyone on the team has their own agent now — give me one combined status update pulled from all three."

Text it: "My personal agent knows I'm traveling next week — make sure my business agent doesn't book client calls that morning."

Beyond a personal agent: what else Agentify powers

Your personal agent is the core product. Here's what else lives on the same platform.

Permission tiers, explained simply

Every agent starts out able to answer questions, research anything, and draft whatever you need — free, with no strings attached. As you ask for more (things that touch your real accounts, take real actions, or move real money), your agent unlocks more capability, one step at a time, and always with your explicit go-ahead first. Nothing gets connected or unlocked behind your back.

Explorer (free): Full Q&A, live research, writing and drafting, recommendations, and planning — no account connections needed. Where every agent starts.

Verified: Everything in Explorer, plus long-form content creation, ongoing monitoring (price drops, news alerts), and detailed scheduling help — still nothing connected to your real accounts.

Connected: Your agent can now securely view (read-only) accounts you choose to link — email, calendar, socials, even a brokerage account — so it can report and alert instead of you checking manually. It still can't take action on your behalf at this level.

Trusted: Your agent can now take real action with your explicit confirmation — sending an email as you, executing a trade you've asked for, submitting a form — always shown to you before anything actually goes out.

Power: The top tier for people who want to hand over standing authority for recurring actions, run multiple coordinated agents, or need custom integrations — reviewed and set up personally, not a self-service toggle.

You can always ask your agent exactly what tier you're on and what unlocking the next one would let it do — no hunting through settings required.

Agentify Support Desk, for business customers

Beyond the personal agent, businesses can hand their entire customer support desk over to Agentify — phone, text, and email, all trained on that business's own hours, pricing, policies, and FAQ. Customers get an accurate, on-brand answer any time of day, and anything that actually needs a human — a refund, a complaint, a real judgment call — gets escalated to a real person instead of being guessed at. It never invents a policy or price that isn't in the business's own materials, and it's always upfront that it's an assistant if asked.

hey do you guys do same-day appointments for a leaky faucet? and roughly what does that run

Yes — same-day is available for plumbing calls booked before 2pm on weekdays. For a standard leaky faucet repair, our range is \$120–\$180 depending on the fixture. Want me to check today's availability and get you on the schedule?

Family & team plans

You're not limited to a single agent under one account. Plenty of people run a personal agent for themselves alongside separate agents for a partner, kids, or other family members — each with its own private memory, so nobody's conversations bleed into anyone else's. The same setup works for a small team: everyone gets their own agent, and the agents can coordinate with each other on a shared goal when that's actually useful, without losing the separation that keeps each person's context private.

How to actually get started

No app to download. No dashboard to learn. No prompting technique required — just talk to it.

Reach it however's easiest

You get a dedicated phone number and email address for your agent, reachable across every channel below. Same agent, same memory, no matter which one you use.

[Text](#)[Call](#)[Email](#)[WhatsApp](#)

Four steps, five minutes

1

Start your free trial

Sign up in 60 seconds. No credit card required. You get 7 days to put your agent through its paces.

2

Name your agent

Tell us what to call it, what to handle, and connect your calendar or email if you want to. Everything gets configured for you.

3

Text, call, email, or WhatsApp it

"Remind me about my 3pm." Call it on your drive. Email it a long request. Your agent reads or hears it and just handles it.

4

Add more tokens anytime

Need more? Top up your token balance anytime or upgrade your plan. Your agent keeps going without missing a beat.

There's no special way to talk to it

No commands, no magic words, no "prompting." It lives at a phone number, so just text it the way you'd text a friend who happens to know a lot and never sleeps. Half sentences, typos, voice-of-your-head rambling — all fine. If it needs more detail, it'll ask.

hey not sure how this works. what should i even ask you

Whatever's actually useful to you. People text me questions, stuff they need to remember, things they're stuck on, or just what's going on today. Try me with something real and we'll go from there.

Ask it to do something, not just answer something

Most people start by treating it like a search box, and it's fine at that. But the real value is handing it actual work: a reminder, a tricky email, a plan for the week, a decision you're stuck on. When it drafts something, it writes it and hands it back to you — you're always the one who hits send.

Texting vs. calling

Texting is the default and works for almost everything. But your agent can also make and take real phone calls — same number, same agent, same memory of everything you've talked about. Voice is for when typing is annoying: you're driving, walking, cooking, or you just want to think out loud for five minutes.

can i actually call you? i'm about to drive 2 hours and want to talk through this job offer

Yep, call this same number whenever you're on the road. I've got the context from what you told me about the offer last week, so we can pick up right there.

Pictures, voice notes, and video too

Your agent can generate real media and send it straight into your text thread — images, short audio clips, and short videos, delivered like any normal attachment. People use it for a quick visual to explain an idea, a mockup to react to, or a voice memo when reading isn't convenient.

When it can't do something yet

Sometimes you'll ask for something it can't do today. When that happens, it tells you straight and flags the request for the actual team to review — it won't pretend it did something, and it won't make up a fake promise of follow-up. Same with hard boundaries: it won't give specific investment picks, medical diagnoses, or legal advice beyond general concepts. The honesty is the point — you always know exactly where you stand.

Getting more out of it

The first week is figuring out that it works. The second week is where it actually starts paying for itself.

Teach it once, not every time

The single biggest difference between people who love their agent and people who think it's "fine" is whether they bother correcting it. If a draft comes back too formal, too long, or missing something you always want included — say so, once. That preference sticks permanently, the same way a fact about you would. Most people under-use this in week one because they're used to chatbots that forget everything by the next session.

this email is good but can you stop starting everything with "I hope this finds you well" — i never talk like that

Noted — dropping that opener for good, for you specifically. I'll go straight into the point from here on.

Give it standing instructions, not just one-off asks

Most people start by asking for single tasks. The real unlock is handing over a recurring rule once and letting it run on its own — a weekly check-in, a conditional reminder, a "watch for X and tell me" instruction that fires without you thinking about it again.

every sunday night, give me a 2-line summary of what i spent the most time on last week

Done — first one lands this Sunday. I'll pull it from what we've actually talked about and worked on, not a guess.

Let it ask you questions back

A vague request isn't a dead end — it's just an incomplete one. Your agent will ask for the one piece of information it's actually missing instead of guessing and getting it wrong. Answering that follow-up question is usually faster than writing a more detailed prompt up front would have been.

Use it as a sounding board, not just a task-doer

Because it remembers context across weeks, it's useful for thinking out loud about a decision over several conversations — not just executing single tasks. People talk through a job offer over three separate texts across a week; the agent remembers all of it and doesn't make you re-explain the situation each time.

Connect your calendar and inbox if you want it to go further

Your agent works well with nothing connected — reminders, drafts, research, and planning all function out of the box. Connecting your calendar and email (optional, revocable anytime) lets it go one step further: it can actually see what's on your schedule instead of you telling it, and draft replies with the real thread in front of it instead of a summary you typed out.

A day in the life

One agent, one thread, moving across every part of life all day without ever needing to be told which "mode" it's in. Here's what that actually looks like.

6:20 AM

FAMILY

Before anyone's awake: the shared household agent flags that two of the kids' after-school activities overlap on Thursday, and asks whether to move the dentist appointment or the piano lesson.

7:02 AM

PERSONAL ASSISTANT

The morning briefing lands before coffee finishes brewing: three meetings today, a bill due Friday, and a reminder that the dentist called back yesterday and never got a callback.

7:45 AM

HEALTH

"Log this — 3 miles, 28 minutes, felt good." Logged, and the agent notes it's the fastest pace this month.

9:15 AM

SHOPPING

A text arrives on its own: the mattress on watch just dropped \$60 below the target price. No need to ask — it was already tracking it.

11:30 AM

BUSINESS

"Follow up with the client I quoted last Tuesday if I haven't heard back by Friday." Said once. It'll happen automatically, no need to remember it again.

1:00 PM

FINANCE

A quiet check-in: spending on eating out is at \$340 this month against the \$400 ceiling set two weeks ago. No lecture, just the number.

3:40 PM

HOME

"Find me a plumber near me who does emergency calls on weekends." Three real options come back in under a minute, with numbers and hours — no guessing, no made-up listings.

5:15 PM

TRAVEL

The flight to Denver being watched all week finally drops under \$350. A text arrives with the details — book it, or keep watching another day?

6:00 PM

CONTENT & SOCIAL

"Turn this into 3 short LinkedIn posts in my usual voice." Three drafts, ready to review and post — nothing goes out without a final look first.

7:30 PM

LEARNING & TUTOR

"Quiz me on Spanish verb conjugations for 10 minutes." A quick back-and-forth before dinner, picking up right where last week's session left off.

8:45 PM

EVENT PLANNING

A gentle nudge: two people still haven't RSVP'd for Saturday's birthday party, and it's been three days. Want a reminder sent, or leave it?

9:50 PM

REAL ESTATE

A new listing goes up two streets over — a 3-bed under the price ceiling set months ago. It's flagged before the sun's up tomorrow.

11:40 PM

SUPPORT DESK

Miles away, a customer texts a local business's support line about a warranty question at nearly midnight. Agentify's Support Desk answers instantly from the business's own policy docs — no one had to wake up for it.

Countless different jobs, one running conversation, zero re-explaining. That's the actual product — not a fixed set of modes, one general-purpose agent that already knows the context for all of it, whatever you throw at it next.

What people actually use it for

Composite scenarios based on the real ways early users put their agent to work — names and details changed.

SOLO CONTRACTOR

A handyman running his own jobs used to lose leads overnight — a Thumbtack message would come in at 9pm, and by the time he saw it and replied the next afternoon, the customer had already booked someone else. His agent now drafts a reply the moment a new lead lands, using his actual pricing and availability, so he just has to glance and hit send. He estimates it's saved him three to four jobs a month that would've gone cold.

Based on a real Driftwood Digital lead-response workflow.

NEW PARENT

Between a newborn and a full-time job, the mental load of "remembering everything" got overwhelming fast. She started texting her agent anything she needed to not forget — pediatrician follow-ups, when the reflux medication needed refilling, which grandparent offered to babysit which weekend. It became less of an assistant and more of an external memory she didn't have to maintain herself.

Composite, common early-trial pattern.

FREELANCE DESIGNER

Client follow-up was the task she always meant to get to and never did. She set a standing rule: if an invoice sits unpaid 7 days past due, or a proposal goes 5 days without a reply, the agent nudges her with a drafted follow-up ready to send. Nothing goes out without her okay, but she no longer has to remember which open threads need a nudge today.

Composite, based on a common Business Agent use case.

RETIRED INVESTOR

Not interested in another dashboard to check daily, he just wanted plain-English answers about his own accounts — not stock tips, just clarity. "What did I actually spend on healthcare this quarter?" gets a real number pulled from his own data, not a guess. He calls the agent on his drive to the golf course more often than he texts it.

Composite, illustrating the Finance Agent + voice-calling pattern.

SMALL BUSINESS OWNER

A local shop owner used to lose after-hours customers outright — a text or call at 8pm just went unanswered until the next business day, and plenty of people didn't wait around. She put Agentify's Support Desk on her phone, text, and email lines, trained on her own hours, pricing, and policies. Now a customer asking about a return policy at 9pm gets a real, accurate answer immediately, and anything genuinely tricky gets flagged straight to her instead of guessed at. She stopped thinking of after-hours as "lost business."

Composite, illustrating the Agentify Support Desk pattern.

FAMILY OF FIVE

Between two working parents and three kids with three different schedules, the family calendar used to live in someone's head and fall apart constantly. Now each family member has their own agent, coordinating on the shared stuff that actually needs it — who's picking up from practice, whose turn it is on chores, what's on the shared grocery list. Nobody has to be the one holding it all together anymore.

Composite, illustrating the Family & Household Coordination pillar.

Tokens, in plain English

The only unit you actually need to understand before picking a plan.

What's a token?

A token is roughly three-quarters of a word — not a message, not a minute, not an API call. Every text you send and every reply you get back is measured in tokens, along with anything your agent has to read to help you (a long email you forward it, a document you ask it to summarize). Short back-and-forth texts use very few tokens. Long documents, detailed research, or an agent that has to hold a lot of context in mind use more.

What that looks like day to day

A typical short text exchange — "remind me about my 3pm" and the confirmation back — runs a few hundred tokens. A detailed request, like drafting a two-paragraph email or planning a weekend itinerary, runs a few thousand. Summarizing a long document or research task can run higher depending on how much it has to read. 100,000 tokens, the amount included in the Standard plan, comfortably covers dozens of normal daily conversations for most people — it's built around real usage patterns, not a number picked to look big.

Why usage-based, not a flat unlimited plan

A flat "unlimited" plan usually means one of two things: it's quietly capped somewhere you can't see, or the price is inflated to cover the heaviest possible user so everyone else overpays. Pay-as-you-go past the included amount means someone who mostly uses reminders and quick questions isn't subsidizing someone running deep research requests all day — and neither one hits a wall or an unexpected upgrade prompt.

You can always just ask

Your agent can tell you exactly where your usage stands at any time — no separate dashboard required.

how many tokens have i used this month

You're at 34,200 of your 100,000 included this month — about a third of the way through, with 19 days left in the billing cycle. At your current pace you won't come close to the overage rate.

Start free. Scale as you grow.

One dedicated agent, always. Your plan determines how much it can do. Pay only for what you use.

Common questions

How is this different from a typical AI chatbot?

A chatbot lives in an app — you open it, type a prompt, get an answer, and it forgets you the moment you close the tab. Agentify is your own personal agent: an employee, a friend, whatever you need it to be. It remembers you across weeks and months without being asked to, and it actually accomplishes real-life goals and projects on your behalf — not just words back, but the thing itself, done.

What does "text, call, or email your agent" actually mean?

You get a dedicated phone number and email address for your agent, and it's reachable on WhatsApp too. Text it, call it, email it, or WhatsApp it like you would a real person: "Remind me about my 3pm meeting," "Order dog food from Amazon," "What's on my calendar Friday?" Your agent reads or hears it and handles it — no app, no login, no prompt engineering required.

Do I need to know how to "prompt" it?

No. There's no special phrasing, no commands, no technique to learn. Half sentences, typos, and rambling voice memos all work fine — if your agent needs more detail, it just asks. The best first message is whatever's actually on your mind right now.

Can my agent send emails and messages as me?

Yes — with your permission. You set auto-approve for low-stakes tasks (scheduling, reminders) and require manual approval for others (emails to clients, purchases over a threshold you set). You're always in control of how much autonomy your agent has.

Is my data safe?

Each agent's data is fully isolated and encrypted. We never share your data or use it to train models. All integrations use standard OAuth — your passwords never leave your accounts. You can export or delete everything at any time.

Can I cancel anytime?

Yes. Monthly plans cancel anytime with no penalty. Annual plans receive a prorated refund if cancelled after 30 days. No contracts, no surprises.

What happens once I hit my included tokens?

Nothing stops. On the Standard plan, you get 100,000 tokens included each month, and anything beyond that is billed at \$0.0018 per 1,000 tokens — no forced upgrade to a bigger tier just because you had a busy month.

Can I have more than one agent?

Yes. Plenty of people run a personal agent and a separate business agent so the two never mix context. Teams can give every member their own agent under one account — that's what the Enterprise plan is built for.

What happens when the free trial ends?

Nothing gets charged automatically. After 7 days you'll be asked to pick a plan to keep going — if you don't, your agent simply pauses. No surprise charge, no auto-conversion.

Does it work outside the US?

Email and WhatsApp work from anywhere. Text and voice coverage depends on your carrier and country — ask your agent to confirm what's available for your number, and it'll tell you straight rather than guess.

Can I rename my agent or change how it talks later?

Anytime. Tell it a new name, a different tone, or a personality tweak, and it takes effect immediately — no reset, no losing what it already knows about you.

What if it gets something wrong?

Tell it directly — it doesn't get defensive, and the correction sticks the same way a fact would. For anything that goes external (an email, a message, a purchase), your autonomy settings mean it was already waiting on your approval before it went anywhere.

Does it work in languages other than English?

Yes. Text or talk to it in whatever language you're most comfortable in, and it responds in kind — it doesn't need to be told to switch.

READY WHEN YOU ARE

Try it free for 7 days. No credit card, no catch.

Sign up, name your agent, and text it the first thing that's actually on your mind. That's the entire onboarding process.
